Wiring diagrams, description

A wiring diagram is divided into circuit name(drawing number) and consists of a number of pages.

The following is an explanation of the symbols used in circuit diagrams:

- X is connection terminal (followed by number)
- Designation 353-2

  353 is component designation (see *Component designations page 27* for description of respective component). 2 indicates that it is the second component of this type in the specific diagram.
- Sensors, etc. are drawn in resting position on circuit, powerless mode
- Colour cable harness:

  White cable = ground signal

  Grey cable = Other cable harness
- Fuse box, e.g., F58, means fuse box with 8 fuses
- An arrow symbol means a reference to another circuit diagram
- 20015.0001 wiring diagrams-item designations K-standard.

  K-standard 1: norms, rules

  K-standard 2: cable harness, general physical

  K-standard 5: Designation and marking systems, item designations wiring diagrams
- Ground connection:

  1: X37-A is ground connection in the electrical distribution box. A connection terminal for ground. Frame ground connection - connection terminal to chassis.

  2: Zero reference found in control units.

Component designations

The components in circuit diagrams have a prefix and number, the prefix describes the type of component, the number which component.

Component list with component number, prefix and designation is provided as an appendix after the circuit diagrams.

Prefix	Description
B	Converter from non-electric to electric signals or vice versa. Example: inductive sensor.
D	Binary element, delay unit, memory. Example: control unit.
E	White light. Example: work lights.
F	Protective device. Example: fuse.
G	Alternator, power supply device. Example: battery.
H	Signal device. Example horn, brake lights.
K	Relay, contactor. Example: power relay ignition.
M	Motor. Example: electric motor.
P	Measuring instrument, testing equipment. Example: operating hour gauge.
R	Resistor. Example: potentiometer.
S	Electric switch for control circuit, selector. Example: switch.
X	Outlet/socket, connecting device: Example: connection terminal
Y	Electrically controlled mechanical device: Example: solenoid valve, hydraulic valve.

Oils and lubricants, recommendation

The service intervals indicated by Kalmar Industries in the maintenance manual only apply if oils are selected according to the table below. The table indicates recommended viscosity for different oil types and qualities depending on the ambient temperature.

Any deviation from this table must be approved in writing by Kalmar Industries, and may mean changed service intervals.

Oil type, quality	°C	-40	-30	-20	-10	0	+10	+20	+30	+40

NOTE

The change interval for engine oils is conditional on the sulphur content in the fuel does not exceed 0.5 %.

Oil filters shall always be changed in connection with oil change.

*) The lubrication oil must meet both standards. **NOTE!** API: CH-4 or CH-4 are approved for markets outside of Europe (Instead of ACEA E5).

**) Same oil as for Volvo TWD1240VE may be used on the condition that the change interval is reduced to 400 hours.

***) The oil in the brake system must meet one of the quality standards as well as be a UTTO-oil (Universal Tractor Transmission Oil).

ACEA = Association des Constructeurs Européenne d'Automobiles

API = American Petroleum Institute

VDS = Volvo Drain Specification

Grease

Use a universal grease type EP acc. to NLGI Grade 2 with 3-5 % molybdenum sulfide content for all grease points except for slide plates and pins/axles with bearings not requiring greasing.

For slide plates, use lubrication paste Gleitmo 805 or its equivalent.

For pins/axles with bearings not requiring greasing, use aluminium paste Loctite 8150 or its equivalent.

For electrical contacts, Electrical connector grease 923836.0552 shall be used.

Sealant silicone

Use Loctite 5972 or Loctite 598 (or equivalent). If uncertain, contact Kalmar Industries.

Tightening torques, recommendations

The tightening torques in the following table are recommendations when tightening bolts and nuts.

When torquing using a machine, for example, bolt runner, the tightening torque should be reduced by approx. 5%.

For mild surfaces (hardness below 200 HB), washer shall be used under both bolt head and nut. Alternatively, use flange bolt or flange nut.

Tighten to the prescribed torque without stopping.

Recommended tightening torque may vary depending on surface treatment. Certain combinations of nut and bolt require lubrication according to the table below.

State	Bolt	Nut	Lubrication
1	untreated	untreated	oil
2	bright-galvanized	untreated or bright-galvanized	dry or oil

Terminology

Term	Description
Accumulator	Reservoir that stores (accumulates) pressure for i.e. hydraulic functions.
Anti-corrosion compound	Prevents oxidation, in simple terms, rustproofing.
Attachment	Part of the machine that grabs the load when lifting.
Axle distance	Distance between drive axle and steering axle.
Bar	Unit to express pressure.
Battery disconnector	Cuts off current from battery.
Boom	Lift beam moveable vertically and in-out. Bracket for attachment.
Bottom lift attachment	“Lift legs” that can be raised/lowered for handling loads. Grabs load from below.
Buzzer	Acoustic alarm to catch the operator’s attention.
Control valve	Valves that can be used to control something, for example, to release pressure and thus lower a boom or a fork. See also control valve.
Daily inspection	The actions that should be performed daily to ensure the machine’s functionality.
Decitonne	Tenth of a tonne, measure of the machine’s lift capacity.
Display	“Window” showing digital information on steering wheel panel in cab.
Drive axle	Driving axle that receives the torque from the drivetrain.
Drivetrain	Parts in machine involved in power transmission; engine, torque converter, transmission, propeller shaft and drive axle with differential and hub reduction.
Dust reservoir	The air filter collects the coarsest particles in a dust reservoir, emptied automatically during operation.
ECC	Electric Climate Control. Climate unit with thermostat-controlled cooling, dehumidification and heating.
EHC	Electric Heat Control. Heater unit with automatic heat control.
Electrolyte level	Fluid level in battery cells.
Environmental waste	Used oils, filters, etc., must be handled according to governing national laws and regulations.
Expansion tank	Tank for coolant.
Fixed displacement	Pump with fixed pump volume.
Hanging load	Lifted load.
Hub reduction	Type of final drive (often next to drive wheel) that reduces rpm and increases torque from the drivetrain.
Hydraulic oil	Oil for hydraulic system. See specifications in section *F Technical data*.
Hydraulic oil pump	Pump in hydraulic system.

Term	Description
Hydraulic system	System that uses oil pressure to transfer power to different functions.
Indicator	Manual “sensor”, for example, shows that a filter is clogged and needs to be changed.
LC	Load centre.
Levelling	Attachment is tilted, for example, if load stands on uneven ground.
Lift capacity	Indicates machine’s maximal lift capacity.
Lifting point	Attaching point for lift device when lifting an object.
Low-emission engine	Engine with low emissions of hazardous substances. Manufactured according to regulations.
Machine model	Machine type. Indicated, for example: DRF 400-450. See also type designation.
Main fuse	Located by battery. Cuts off current all systems in machine.
Maintenance	Periodic maintenance actions so that machine functions safely and for long life.
OP	Overload Protection. Overload system to warn when machine is overloaded.
Operating hours	Number of hours machine has been in operation, shown on hour meter in cab.
Option	Optional equipment for machine.
Overload system	See OP (Overload Protection).
Pilot oil pressure	A low control pressure to, for example, a valve.
Planetary gear	Type of transmission with gears in constant engagement.
Product alternative	One of several alternatives is selected for a machine, i.e. engine alternative.
Proportional valve	An electro-magnetically controlled valve. If a current is applied, the valve is activated in proportion to the current’s amplitude. In simple terms, infinitely variable valve, as opposed to on/off valve. For example, on transmission’s valve housing.
Reachstacker	Machine with special top lift attachment for containers.
Refrigerant	Fluid/gas in air conditioning. May only be handled by authorized trained person.
Rotation yoke	Rotating unit on attachment, rotates attachment in relation to lift boom.
Securing machine for transport	Actions before transporting machine.
Serial number	Unique machine designation. On machine plate.
Service position	How machine should be safely positioned before service may be started.
Servo	A small user movement results in a big machine movement, i.e. power steering.
Servo pressure	A low control pressure to control a higher pressure, for example, to a valve.
Sideshift	Parallel sideways movement of attachment.
Solenoid valve	An electro-magnetically controlled valve. See also proportional valve.
Spirit Delta	Enclosed type of cab.
Spreading	Widening of attachment.
Start up	Start procedure for control and monitoring system (from powerless to supplied with voltage).

Term	Description
Steering axle	Wheel axle with steering.
Tilting	Load is leaned forward or backward.
Torque converter	Hydraulic, variable clutch.
Transmission oil	Oil for transmission and torque converter. See specifications in section *F Technical data*.
Twistlocks	Four lock pins, one in each corner of the attachment, pushed down in corresponding holes in container and twisted to lock the container when lifting.
Type designation	Indicates machine type and capacity. See also machine model.
Valve slide	Moveable part in valve. Determines oil's path.
Variable displacement	Adjustable volume (capacity) of a pump.
Variable pump	Pump with adjustable flow rate.
Wet brakes	Brake discs in oil-bath.
Working hydraulics	All load handling functions, i.e. lift and lower, tilt, sideshift, spreader and levelling.
